

In this guide we'll help you add the **ContactSuite** WebApp to your phone's homescreen. This way you'll always be able to quickly and easily change your settings. Because the steps are a little bit different for both iOS and Android, we'll be talking about both in this document.

With the default browser of your smartphone, go to:

<https://company.contactsuite.nl/app>

Replace 'company' with the name that is in your regular **ContactSuite** URL.

Log in with the credentials you usually use on your desktop computer. Once successfully logged in, click the on iOS  at the bottom of the screen or on Android the  at the top right.

This opens a menu, find and select the option to on:

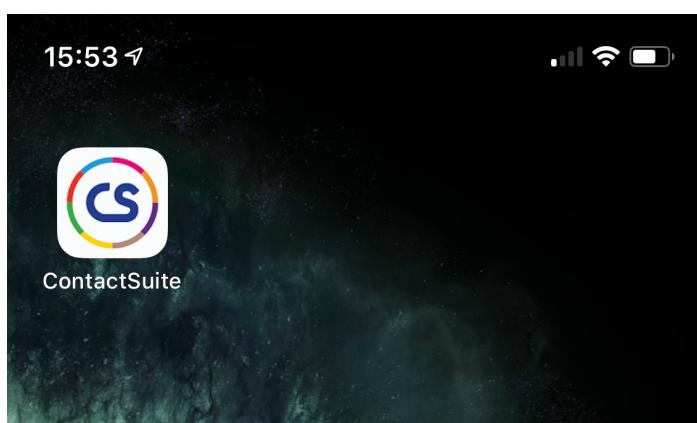

iOS: Add to Home Screen

Android: Add to Home screen

When you click this you'll see a dialog where you can enter a name.
Enter a descriptive name, for example: ContactSuite

Save and you're all set.

iOS

Android
